

Pin up this checklist to save yourself valuable time!

Time Saving Checklist

To assist in producing an exceptional esthetic result, please incorporate the following items with your case.

ESTHETICALLY FUNCTIONAL CROWN CASE CHECKLIST

- Study models** (for the labs reference when creating new smile)
- Models of provisionals/temps** (for the labs reference when creating new smile)
- Master impressions** – they must capture the details and contours of every tooth in the mouth
- Bite registration over the prep** (Blu-Mousse recommended)
- Photos of preps**
- Photos of preps with stump shade** (Only EMAX cases must have stump shade)*
- Photos of temporaries** – full face including eyes
- Photos of pre-op teeth** (pre-op indicates before any treatment has begun) with shade guide from different angles (frontal view, sagittal view and view with relaxed lips)
 - Take shade **before** prepping the teeth
 - Take shade photos **within 3 minutes** to avoid the teeth from dehydration (dry teeth can result in the shade being brighter than the actual shade)
- Detailed lab slip** expressing goals for your patient

*USE IPS NATURAL DIE MATERIAL STUMP SHADE GUIDE (IVOCLAR)

PHOTOS:

For facial view photos, capture the area from the hairline to the chin.

Position the shade guide directly beneath the actual tooth or preparation in the photo, ensuring the shade tab is visible for reference.

On the lab slip, include essential patient details such as shade, shape, measurements, and any patient concerns.

iPhone photos are not recommended, but if no other option is available, use portrait setting and set the Focal Ratio at 10-16.

If you require additional photography support, contact Gnathodontics Dental Laboratory to schedule a custom shade-taking appointment for your patient.

**SEND PHOTOS TO:
PICS@GNATHO.COM**
